Profile

I build teams and products from the ground up — and I make sure they scale.

Over ten years in tech, I've moved from writing code to leading engineering organizations, designing systems architecture, and shipping AI-powered products that deliver measurable business outcomes. My career has been a deliberate path through every layer of the stack — infrastructure, backend, platform, SRE, full-stack — because I believe the best technical leaders are the ones who've done the work.

What I do best:

- **Turn AI into a competitive advantage.** Not proofs of concept — shipped products. I've built agentic AI frameworks that cut delivery cycles by 70% and created systems where AI compounds engineering output rather than generating noise.
- **Build high-performance teams, not headcount.** I hire, mentor, and retain engineers who own their domain. I've built teams from zero, restructured underperforming ones, and scaled organizations through hypergrowth — always optimizing for autonomy, ownership, and speed.
- **Architect for scale under real constraints.** I've designed systems processing millions of transactions monthly, led payments infrastructure work alongside the European Banking Authority, and made hard calls on build-vs-buy with real money on the line.

I'm a frequent speaker at international conferences — GopherCon UK, ContainerDays, DevBCN — where I break down complex systems thinking for technical audiences. I contribute to open source, train underrepresented groups through Code First Girls and Colourintech, and believe that a strong engineering culture is the most durable moat a company can have.

Outside of engineering, I produce music, build audio software, and write — all of which sharpen the same muscle: creating something from nothing and shipping it.

Employment

BB Services / Founder & Technical Lead

January 2025 - Present

Building products, teams, and revenue engines from scratch. BB Services is my vehicle for hands-on leadership across technology and creative ventures.

- Architecting and developing **VST audio plugins** for guitar — real-time DSP software requiring low-latency C++ and signal processing expertise
- Built and scaled **Brudne Brzmienie**, a media brand reaching **80k+ audience** with a repeatable content framework driving **400k+ monthly views** across all platforms
- Advising early-stage companies on **engineering team structure, technical strategy, and AI adoption**
- Secured and delivered interviews with internationally recognized artists (Glenn Hughes, Andy Timmons, Myslovitz), demonstrating stakeholder management at scale

SpotOn / Senior Software Engineer II / Tech Lead

March 2025 - April 2026

- Built an **AI agentic workflow framework** that compressed sprint delivery from **6+ weeks to under 2 weeks** — a 70% reduction in cycle time
- Reverse-engineered and documented legacy services with **zero existing documentation**, unblocking multiple downstream teams
- Transformed two groups of individual contributors into **cohesive, self-directing teams** with clear ownership and delivery accountability

Form3

/ Lead Software Engineer

May 2023 - March 2025

- Led a team delivering **next-generation European payment infrastructure** on **SEPA** systems
- Shipped the **largest payment schema message format update in company history**, coordinating directly with the **European Banking Authority**
- Re-architected internal development processes, eliminating bottlenecks that had stalled feature delivery for months
- Established a team culture centered on **collective ownership** — shared on-call, shared wins, shared accountability

/ Senior Go Software Engineer

February 2022 - May 2023

- Engineered payment gateways processing **millions of transactions monthly** with strict latency and reliability requirements
- Delivered infrastructure optimizations that produced **measurable cost reductions** across cloud providers
- Designed and implemented **observability systems** (metrics, structured logging) that halved on-call resolution times
- Became a visible representative of Form3 in the **Go community** through conference talks and meetup leadership

BP (via **ECS Digital**) / Site Reliability Engineer

October 2021 - February 2022

- Designed and delivered an **end-to-end observability platform** using **Honeycomb** and **OpenTelemetry** for a key product line
- Drove **SRE culture adoption** across engineering teams — on-call practices, SLI/SLO frameworks, toil reduction

Barclays (via **ECS Digital**) / Go Software Engineer

October 2020 - September 2021

- **Lead developer** on a system that scaled from **zero to 70,000 chat conversations/day in two weeks**, serving **9.4 million customers**
- Reduced AWS infrastructure costs by **40%** through service re-architecture
- Won the **ECS Change Makers Award** for delivery and client impact

ECS Digital / Go Software Engineer

July 2019 - February 2022

- Rebuilt a data discovery platform from a 12-hour monolith batch process into a **microservices suite completing in 10 minutes**
- Designed **AI-integrated analysis pipelines** using Go, Python, and graph databases (dGraph, Neo4j)
- Led the internal **SRE Guild** and onboarded/mentored engineers across the company

Earlier Career — *2013 - 2019*

Built foundational expertise across the full stack: **video processing & AI integration** at Calipsa (also served as Scrum Master, introducing Agile practices company-wide), **technical training** at Sparta Global where I trained three cohorts now placed at UK Home Office, Three Mobile, and UK Ministry of Justice, and **application/infrastructure work** at ABB where I automated a 4-hour validation process down to 5 minutes. I've also worked as a customer service specialist in various outlets.

Skills

Core Go/Golang, Rust, Python, TypeScript, C/C++, AI/ML Systems, Real-time DSP

Architecture & Infrastructure Microservices, Event-Driven Systems, Kubernetes, Terraform, Docker, AWS, GCP

Data PostgreSQL, MongoDB, DynamoDB, Neo4j, dGraph

Practices Engineering Team Leadership, Agile/Scrum, SRE, Observability, CI/CD (GitHub Actions, Jenkins)

Certifications

- **Systems Programming for Linux Containers** - man7.org - September 2022
- **Certified Kubernetes Application Developer** - The Linux Foundation - July 2021
- **Site Reliability Engineering Foundation** - DevOps Institute - May 2021
- **AWS Certified Database - Specialty** - Amazon - March 2021

- [AWS Certified Developer - Associate](#) - Amazon - October 2020
- [ITIL Foundation](#) - Conlea - June 2017

Speaking & Thought Leadership

- **ContainerDays Hamburg 2023** — Need For Speed: Scaling Go Microservices
- **GopherCon UK 2023** — The Shimmy to the Left: Why Security is Coming for Engineers
- **DevBcn Barcelona 2023** — Need For Speed: Scaling Go Microservices
- **GopherCon UK 2022** — [The Joy of Linters](#)
- **GoLab Firenze 2022** — [Call Me Maybe: Communication Between Microservices](#)
- **ContainerDays Hamburg 2022** — [Call Me Maybe](#) / [Cloud Confused](#)
- **Microsoft Tech Days** — Moderated Learn Go on Azure as a Golang SME
- **Devops Playground** — [Live: Building a CRUD API in Go](#)
- **Golang in London** — [Terminal Music Player](#) / [Structuring Go Programs](#)

Open Source & Community

- **Contributor** — Grafana Labs ([v7.0.0 beta](#)), Chef ([golang cookbook 5.2.0](#)), [Rod](#) (Chrome DevTools driver), VS Code Polish translation
- **Technical Trainer** — Code First Girls (two editions), Codebar, ColorInTech (two annual workshops)

Education

Cracow University of Technology **Power Engineering** / BEng

2013 - 2017

Engineering thesis: *Acoustic measurements of electrical engines*
